

Professional solutions for professional people

C + P Fire department lockers and cabinets.

All locker
bottoms are
zinc-plated as
a standard for
optimal corrosion
protection.

Developed together with firefighters for firefighters

Rescuing – extinguishing – recovery – protection: Whether you're dealing with rescuing, extinguishing, recovery or protection operations, you'll overcome the biggest challenges every day together as a team. This requires 100% professionalism – just like the storage space in your fire station. We have developed a series of fire service lockers for you that flexibly covers all your individual needs. From youth and volunteer firefighters, to on-site fire departments. All the models have one thing in common: They are extremely robust and highly functional, comply with all current guidelines, and look amazing to boot. All C + P fire service lockers can be conveniently combined with one another: Choose from extensive equipment and various colors – we don't put any limits on your locker dream team.

Equipment features

Foldable helmet holder with effective ventilation function, suitable for all EU helmet manufacturers and sizes without adjustment, suitable for contact microphones.

Fire brigade cabinets and fire brigade lockers by C + P ensure that your personal protective equipment (PPE) along with your own clothing are always properly and safely stored, guaranteeing quick drying.

Sturdy handle that makes it easy even for short people (160 cm and smaller) to reach the bottom of the helmet.

A special hanger that prevents clothes from creasing and speeds up drying thanks to optimized air circulation. Equipped with a hotel security ring to protect the hanger from theft.

Integrated security compartment for secure storage of valuables such as wallets or smartphones—lockable using a cylinder or combination lock.

For safe storage and quick removal of accessories: Side hook rail with 30 kg load capacity and stainless steel hooks.

Maximum stability and robustness due to the material steel and high-quality workmanship.

The sophisticated ventilation system helps to dry uniforms quickly.

Fully separate storage made easy and highly flexible

Many fire stations have to be modernized to guarantee the legally prescribed fully separate storage and therefore avoid a potential spread of contamination. In new buildings too, this is an essential requirement according to DIN 14092 "Fire stations" in part 1 "Elements for design." Fire service lockers can easily be combined with each other: choose from different types of equipment and many different colors – the possibilities are endless for your locker dream team.

Diverse color and equipment options for your locker room

For optimum corrosion protection, all cabinet foot parts and bases are galvanized as standard and the cabinet feet are made of plastic.

Fire service lockers from C + P ensure that your personal protective equipment (PPE) and also your private clothing are always safely stored and that quick drying is guaranteed. As all models are compatible with each other, they can be very flexibly combined so that the storage solution fits perfectly with the individual needs of your fire station and team. The colors are also flexible: in addition to the traditional "fire red," there is a wide range of other colors to choose from.

Variety

Possibilities

Classic red? If you like, but it doesn't need to be that way. You have the choice of C + P fire brigade cabinets and fire brigade lockers not only in terms of design and equipment, but also in terms of colour. This results both in order and functionality along with visual variety at your fire station.

Maxi

The Team's Storage Space Marvel.

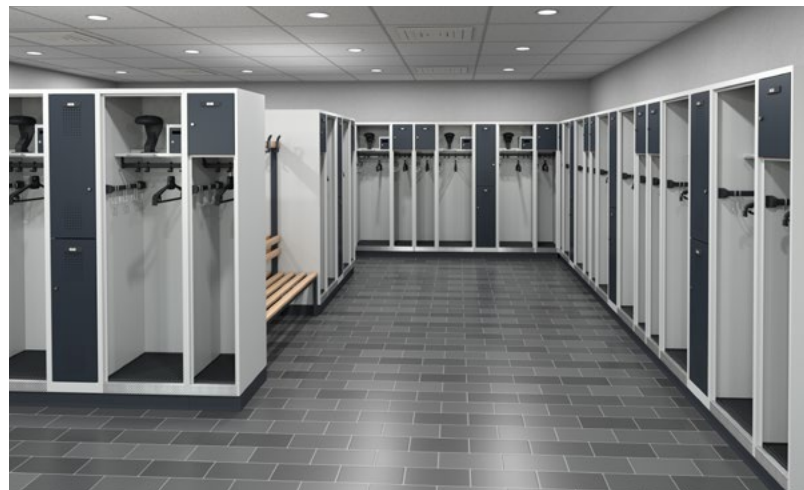

Professional and proper fully separate storage of uniform and personal clothing.

Perfect for professional and on-site fire departments

Because of its design, the MAXI model provides a particularly large amount of space for uniform clothing, which makes it perfect for the functional requirements of professional and on-site fire departments. Designed in close collaboration with experts, the C + P fire service lockers are technically advanced and closely geared toward practical use.

Suitable for two persons

The spacious locker design allows for use by two persons. Each person has access to an open compartment for 2x uniform clothing and additional protective equipment and a (lockable) white compartment for personal clothing and additional accessories. The separate storage guarantees a professional separation of clothing, preventing cross-contamination.

Advantages

- + Properly separate storage of uniform and personal clothing
- + Provides maximum capacity for storing uniform clothing
- + Perfect for professional and on-site fire departments
- + Spacious locker design allows for use by two persons

The models shown include optional equipment

Additional equipment

Compartment for uniform clothing

1. Foldable helmet holder
2. Special clothes drying hanger with anti-theft clip
3. Access edge
4. Boot mat
5. (Small) security compartment with insertion slot and access limitation
6. Holding bracket

7. Robust coat rail with high-performance double plastic hooks

8. Side multi-function hook strip with stainless steel hooks

Compartment for personal clothing

- + Security compartment with insertion slot behind lockable door

Flexo

The Team's Extendable Solution.

A clearly divided storage solution, flexible and extendable: The C + P firefighter locker FLEXO features a modular design that enables fully separate storage of uniform and personal clothing to 14092 / D GUV with flexible expansion options.

Suitable for voluntary fire departments

Thanks to its particular qualities, the FLEXO model is perfect for the functional requirements of voluntary fire departments. Completely separate storage is achieved by means of individual modules, retrofit add-on modules and decontaminable sliding partitions.

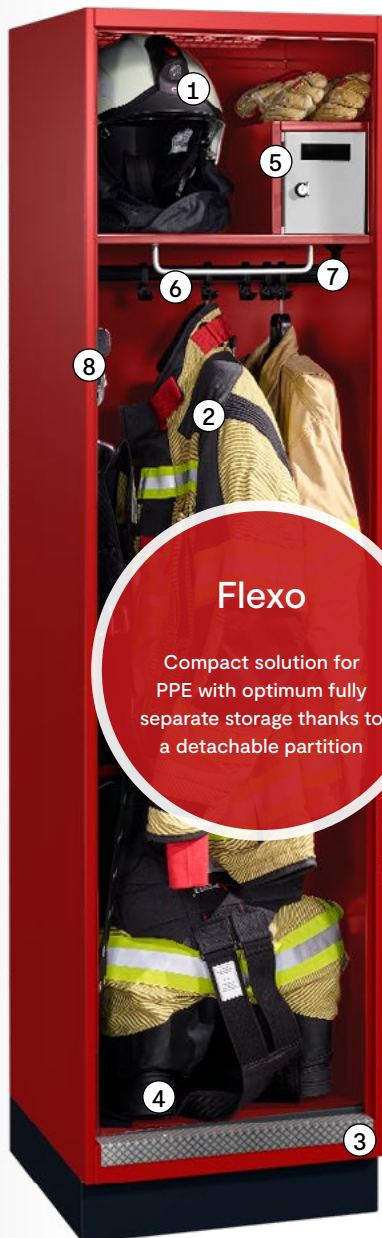

Modular design for maximum flexibility

Thanks to its modular design, fire departments can fulfill standard specifications even if they have existing furnishings, limited space, a restricted budget for investment or different user groups (active and non-active members).

Advantages

- + Perfect for facilities with limited space and a restricted investment budget
- + Modular design allows flexible, completely separate storage and retrofitting options
- + Standard specifications can be fulfilled for various user groups (active and non-active members)

Flexo
 Compact solution for PPE with optimum fully separate storage thanks to a detachable partition

7. Robust coat rail with high-performance double plastic hooks
8. Side multi-function hook strip with stainless steel hooks

Compartment for personal clothing

- + Additional storage shelf/shoe shelf
- + Security compartment with insertion slot behind lockable door

Kombi

The Team's Spacious Solution.

Compact fully separate storage in limited space:
The fire service locker KOMBI from the C + P locker series EVOLO enables proper and exclusive fully separate storage of uniform and personal clothing in accordance with 14092 / D GUV, even in changing rooms with limited floor space.

Perfect for voluntary fire departments

The design of the KOMBI locker model makes it perfect for voluntary fire departments and their practical requirements. Designed in close collaboration with experts, the C + P fire service lockers are technically advanced and closely geared toward practical use.

Storage that promotes drying and rapid removal of uniform clothing

The compartment for uniform clothing and protective equipment promotes drying and rapid removal and helps to prevent the clothes from being damaged. Divided storage of personal clothing in a separate white compartment prevents cross-contamination.

Advantages

- + Convenient and exclusive fully separate storage of uniform and personal clothing in changing rooms with limited floor space
- + Perfect for voluntary fire departments
- + Provides storage that promotes drying and rapid removal of uniform clothing and protective equipment

The private compartment of our KOMBI model is available in two versions:

In the KOMBI series version...

...the right-hand private compartment is closed with a full-length, lockable door (with an upper slot for the compartment behind it).

In the KOMBI Open version...

...there is a lockable valuables compartment with a slot at the top right and an open compartment underneath.

Robust coat rail (load capacity 40 kg)
with high-performance double plastic
hooks (load capacity 15 kg each)

5. (Small) security compartment with insertion slot and access limitation
6. Holding bracket

7. Robust coat rail with high-performance double plastic hooks

8. Side multi-function hook strip with stainless steel hooks

Compartment for personal clothing

- + Additional storage shelf/shoe shelf
- + Security compartment with insertion slot behind lockable door

Praktus

The Team's Traditional Solution.

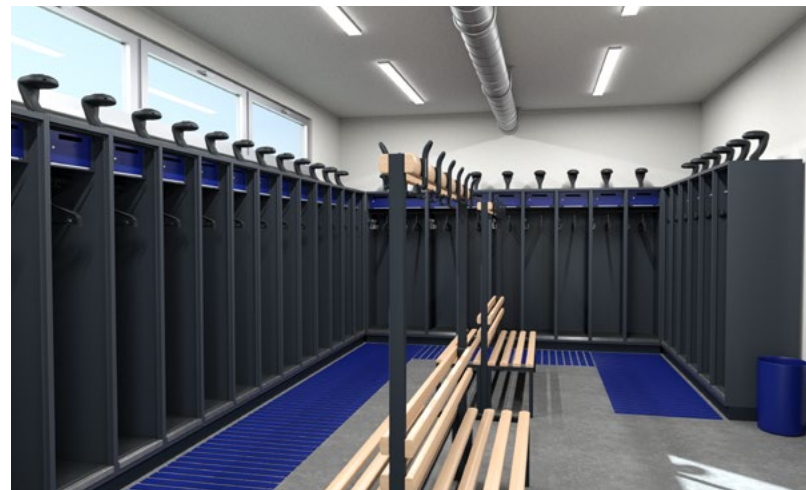

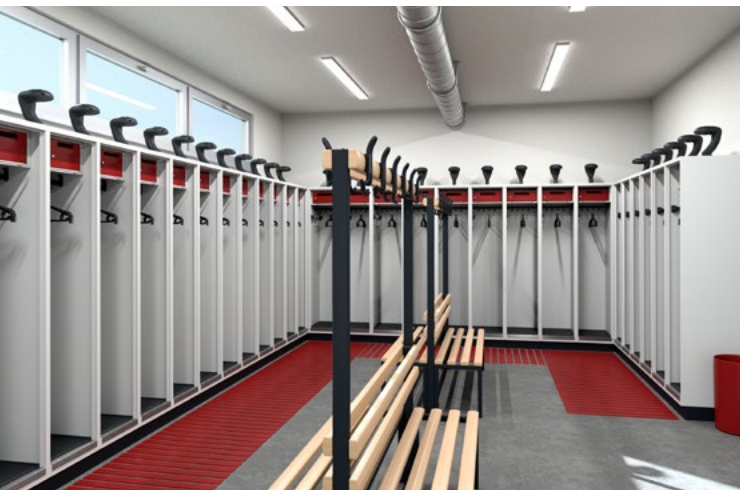

Practical solution for voluntary fire departments: The C + P firefighter locker PRAKTUS provides appropriate storage of uniform clothing in limited space. The open design of the firefighter locker promotes drying and also ensures fast access to clothing.

Generous hanging length & convenient security compartment

Especially practical: the generous hanging length allows clothes to be stored effectively even if they are extra long. The convenient security compartment provides plenty of storage space to store valuables such as wallets and smartphones. With the foldable helmet holder on the top of the locker, there is also a practical storage solution for all standard fire department helmets approved for use in Europe.

Optimized for practical use

Thanks to its particular qualities, the PRAKTUS firefighter locker perfectly meets the functional requirements of voluntary fire departments. Designed in close collaboration with experts, the C + P firefighter lockers are technically advanced and closely geared toward practical use.

Advantages

- + Most generously dimensioned hanging length and security compartment in the entire product range
- + Professional fully separate storage of uniform and personal clothes can be implemented using movable partitions
- + Perfect for limited space
- + Optional comfort version with helmet compartment at removal height

The PRAKTUS model is available in two versions:

In the PRAKTUS standard version...

...the clothes rail is directly under the upper valuables compartment, which makes the generous hanging length possible. The helmet has its place on the top of the locker.

In the PRAKTUS Comfort version...

...the helmet compartment is directly below the valuables compartment at a convenient removal height - with reduced hanging length for clothing.

The models shown include optional equipment

Additional equipment

Compartment for uniform clothing

1. Foldable helmet holder on top
2. Special clothes drying hanger with anti-theft clip
3. Step tread
4. Boot mat
5. Very generously dimensioned security compartment with insertion slot and access limitation

6. Holding bracket
7. Robust coat rail with high-performance double plastic hooks
8. Multi-function side hook rail with stainless steel sliding hooks
9. Small security compartment with insertion slot
10. Glove compartment

Expert

The Team's Special Solution.

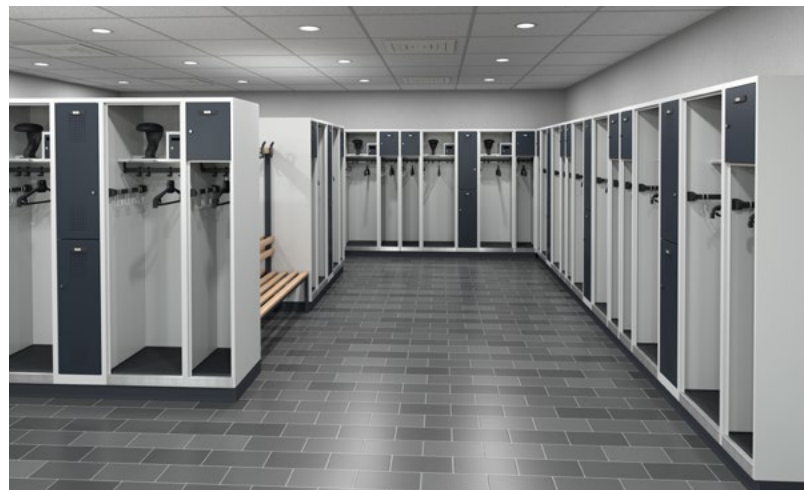

Ideal for water or high-altitude rescue

Flexible addition for special applications

The C + P firefighter locker EXPERT is perfect as a supplementary emergency services locker for special applications like water and high-altitude rescue. It provides storage that promotes drying and provides rapid access for typical uniform clothing such as whitewater jackets, neoprene wetsuits and trousers, whitewater vests and corresponding protective equipment such as towing line, gloves and whitewater boots.

Optimal, completely separate storage

Thanks to its modular design, fire departments can fulfill standard specifications even if they have existing furnishings, limited space and a restricted budget for investment. In combination with other firefighter lockers from the product range, it is possible to implement fully separate storage according to 14092 / D GUV with flexible expansion options.

Advantages

- + Perfect for use as emergency services locker for special applications such as water and high-altitude rescue
- + Flexible and convertible
- + Integrated compartment can be used to store helmet or valuables
- + Foldable helmet holder can be positioned inside the locker (compartment) or on top
- + The modular design allows flexible fully separate storage and retrofitting capability

The models shown include optional equipment

Additional equipment

Compartment for uniform clothing

1. Special helmet compartment with foldable helmet holder
2. Special clothes drying hanger with anti-theft clip
3. Access edge
4. Boot mat
5. Multi-functional compartment, generous in size
6. Holding bracket
7. Robust coat rail with high-performance double plastic hooks
8. Side multi-function hook strip with stainless steel hooks
9. Security compartment with insertion slot and access limitation

Youngster

The Team's Small Solution.

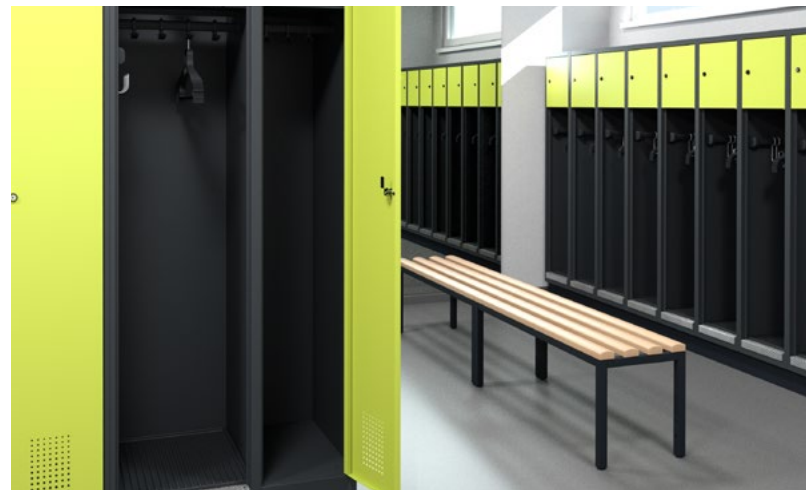

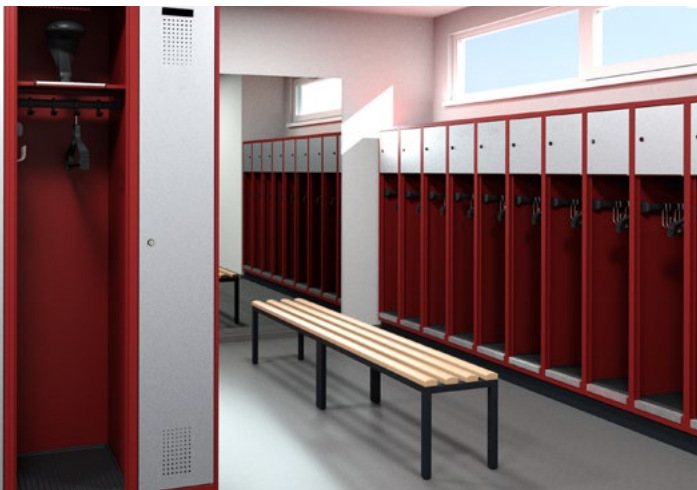

The locker for junior firefighters: The C + P youth firefighter locker YOUNGSTER from the product range EVOLO 4.0 is perfect for junior members of the voluntary fire service. In a compact space, the emergency services locker can be used to store both uniform clothing and other protective equipment.

Fast access to locker contents

Storage that promotes drying and provides rapid access to clothing is possible thanks to the open design of the youth locker. The integrated access edge provides optimum access to locker contents, enabling even shorter people to reach inside.

Practical features

Thanks to its particular qualities, the YOUNGSTER firefighter locker perfectly meets the functional requirements of junior fire departments. Designed in close collaboration with experts, the C + P firefighter lockers are technically advanced and closely geared toward practical use.

Advantages

- + Practical features for the requirements of the junior fire department
- + Storage space solution for uniform clothing and protective equipment
- + Optimum addition to fire department changing rooms

The models shown include optional equipment
